

SOFT INTELLIGENCE
RETAIL SOLUTIONS WITH A PERSONAL TOUCH

Smarter Receiving, Physical Count and Item Lookup with **SOFT INTELLIGENCE SmartScan Plus**

SmartScan Plus puts the power of seamless inventory management in your hands. With **SOFT INTELLIGENCE** direct API integration to Counterpoint SQL, transactions update in real time—no more tedious downloads or uploads from non-integrated scanners. Quickly lookup items, receive shipments, and perform physical counts with ease, all through an intuitive interface that supports gridded and serialized items as well as alternate units. SmartScan Plus isn't just faster—it's smarter, giving your back office the edge it needs.

**SmartScan Plus works on any device running Android 5 or later, with 1GB+ of memory and 250 MB+ of available storage.*

SmartScan Plus features include:

Physical Count

- SmartScan Physical Count directly updates Counterpoint physical count transactions
- Bad barcode scans issue a warning on screen
- On-file barcodes that were not included in the Physical Count freeze are automatically added to the count
- Handles alternate units

Receiving

- Scan items at the time of receipt
- Scan receivings against an existing Counterpoint PO or receive on the fly using Receive without PO
- Quantity received and Quantity expected values are updated in real time as items are scanned
- Easily toggle between assuming a quantity of 1, or manually entering the received quantity for the item
- Properly handles alternate unit barcodes
- Prompts user when a valid barcode is scanned that was not on the original PO- user can decide to add the item to the receiver or skip
- Allows scanning of serial numbers for always and sometimes serialized items

Item Lookup

- User configurable Item Lookup display
- Select up to five Item fields to display
- Choose to display Price-1 or current price with price rule in effect information
- Show color/size information for gridded items
- Show quantity available, on hand and committed by inventory location
- Display primary vendor
